## BGT Datalog - Advantages

- **Fast**

The system will actually read a complete gaming hall in a few seconds. The whole procedure from starting the read-out till getting the excell sheet in the central office will usually not take more than one minute

- **Accurate**

Unlike manual reading, once BGT datalog is setup it cannot make mistakes. It will reveal attendant errors, fraud attempts, etc

- **Universal**

All machines with hard meters are supported. Up to ten meters could be read from each machine regardless their function: in, out, bet, win, drop, jackpot, hand pay, bills, door open...

- **Personal**

Since the data is put in an Excel sheet you can personalise your results and make graphics as per your preferences

- **Comfortable**

With a simple plug-in the BGT datalog system can be connected to a portable computer / internet, which obviously means you could get your revenues both at the operator's central office an/or governmental control office

- **Economic**

The BGT Datalog system is not a server based accounting system, you don't have to pay annual licence fees or software upgrades.
