ACCLOAD Program:	New ACCLOAD V1.21							
ICB Features:	Can be enabled or disabled by the ICB Enable / Disable Setting barcode ticket.							
Barcode Ticket:	Accepts JCM specified barcode tickets.							
EPROM:	4 Mbit, 90 nanosecond data access or faster. ST Part M27C4001-90 or equivalent.							
Modifications:	<p>(Version 3.76-34 → 3.80-34) -08/2010</p> <ul style="list-style-type: none"> Banknote Recognition: Added recognition of the Next generation (NexGen)100 Dollar notes. <p>(Version 3.75-34 → 3.76-34) – 08/2009</p> <ul style="list-style-type: none"> ICB: WBA will check for presence of ICB more often. (Previously, ICB presence was only checked at power-up). <p>(Version 3.70-32 → 3.75-34) – 01/2008</p> <ul style="list-style-type: none"> Banknote Recognition: Added the NexGen \$5 (2006 Series) notes. (Being released March 2008). Banknote Recognition: Added more data to improve acceptance of the \$10 (2003 series). Machine Operation: Improved sensor adjustment method to accommodate a wider range of sensor characteristics. Interface: Added the Bill Validator Hold command. Command specifies a temporary escrow timer (Timer applies to the current note only. Escrow timer reverts back to the previous escrow timer state). ICB: If the Reset Command is received while writing to the ICB, Reset operation will be performed after the data has been completely written. <p>(Version 3.65-32 → 3.70-32) – 06/2007</p> <ul style="list-style-type: none"> Banknote Recognition: Added counterfeit countermeasures against \$100('88), #448 and \$100('90), #495 banknotes. <p>(Version 3.61-31 → 3.65-32) – 08/2006</p> <ul style="list-style-type: none"> Banknote Recognition: Added counterfeit countermeasures against \$100 “Supernotes“. Banknote Recognition: Added High Security \$100 DIP switch selection. High Security mode allows better rejection of "Super Note" type counterfeits. (Selecting High Security may affect the \$100 acceptance rate) 							

**Modifications
Cont:**

- **Banknote Recognition:** Improved recognition, all denominations.
- **Banknote Recognition:** Improved recognition - \$5 (1999 Series).
- **Banknote Recognition:** Improved recognition - \$10 (1999 Series).
- **Banknote Recognition:** Improved recognition - NexGEN \$10 (2004 Series).
- **Banknote Recognition:** Improved recognition - NexGEN \$20 (2004 Series).
- **Machine Operation:** DIP switch assignment change. \$50 / \$100 are now combined on DIP switch 6. DIP switch 7 is assigned to \$100 normal / high security.
- **Machine Operation:** Added cleaning mode. WBA recognizes a custom cleaning card and enters a cleaning mode for a few moments. (Cleaning card is moved in and out of the path 3 times).

(Version 3.60-30 → 3.61-31) – 03/2006

- **Interface:** Before sending a bill in escrow message, the WBA will check the Disable signal. If active, then the WBA will return the banknote.

(Version 3.38-29 → 3.60-30) – 02/2006

- **Banknote Recognition:** Added next generation \$10(Series 2004).
- **Banknote Recognition:** Improved counterfeit \$100 detection. (1996, 2001, 2003 series)
- **Banknote Recognition:** Improved counterfeit \$50 detection. (2001, 2003 series)
- **Banknote Recognition:** Improved recognition of \$50 banknotes (2004 Series).
- **Banknote Recognition:** Improved \$5 (1999, 2001, 2003 series) facedown recognition.
- **Banknote Recognition:** Improved \$5 recognition. (199, 2001, 2003 series).
- **Banknote Recognition:** Improved \$1 banknote recognition.
- **Banknote Recognition:** Improved \$5 / \$10 fraud detection.
- **Machine Operation:** The pusher home sensor is monitored more closely during the push operation. (WBA will enter an error state if any abnormality is detected during this operation.)
- **Interface:** Added cashbox near full message. (Bill Validator Error / Status, bit 8). Send “near full” when counter is at 425 bills.
- **Interface:** Changed default escrow timer. Bills – 8 seconds. Tickets – 32 seconds.
- **Interface:** When a ticket is rejected, the reported denomination value is zero.
- **Ticket Recognition:** If two barcoded tickets are inserted at the same time, both will be rejected. Previous software, it was possible to accept and stack two tickets at the same time.
- **ICB:** Update cashbox remove timestamp every thirty minutes.
- **ICB:** Added ICB feature check. (If ICB modules are installed and determined to be disabled, then report Hardware Error. (Led will flash with a repeated error code).
- **ICB:** Added Banknote Reject codes to ICB memory.
- **ICB:** Added currency assignment table to ICB memory.

(Version 3.35-29 → 3.38-29) – 04/2005

- **Banknote Recognition:** Counterfeit countermeasures: \$10. (Variation of the counterfeit addressed in version 3.35-29 was still accepted in a few cases).
- **Banknote Recognition:** Similar countermeasures implemented for the \$10 bill were also implemented for \$5, \$20 and Next Generation \$20. (Pre-emptive change).
- **Banknote Recognition:** Countermeasures for high quality \$50 and \$100 counterfeit notes found during evaluation at the Federal Reserve Bank.
- **Machine Operation:** A \$5, \$10, \$20 banknote is drawn into the path. Following the usual inspection, if the banknote was inserted green seal first, the WBA will move the banknote about ¼ inch for a final check before sending the denomination message.

(Version 3.34-27 → 3.35-29) – 02/2005

- **Banknote Recognition:** Counterfeit countermeasures: \$10.
- **Banknote Recognition:** Improved \$20 (2004) banknote recognition. (Added more data).
- **Machine Operation:** Motor Speed check method was adjusted.
- **Machine Operation:** During Auto-calibration, the WBA will not listen to communication from the Host.

Modifications Cont:	<ul style="list-style-type: none"> • Machine Operation: Added countermeasure: Case where WBA-CPU runaway occurs during a ticket transaction, after Stack Confirm / ACK messages; ticket was returned. If the Stack Confirm-ACK flag is found to be broken during recovery, then stop and report an error. • Interface: Following a Reset command, WBA status will be "Bill Validator Currently Disabled". (Both Global Reset and Addressed Reset commands). <p>(Version 3.19-27 → 3.34-27) – 08/2004</p> <ul style="list-style-type: none"> • Banknote Recognition: Added Next Generation \$50 banknote recognition. • Banknote Recognition: Improved \$10 counterfeit detection. • Banknote Recognition: Counterfeit countermeasures: \$100 (Found in Japan and Taiwan). • Banknote Recognition: Improved \$50 recognition. (2001 series). • Machine Operation: Improved CPU runaway detection. A CPU run-away event will be detected within 200 ms and corrected. • Machine Operation: Version 3.19-27 has a flaw; when using the "B" interface, the WBA would mistakenly report a "Tampering Detected" error during coupon transactions. The problem has been corrected. • Machine Operation: During power recovery with a ticket in the path, if the WBA receives a reset command, the ticket will still be stacked. (Version 3.19-27 had a flaw where the ticket could be returned, even though the game had already posted credit for the transaction).
Memo:	

Dip Switch Settings

#	Dip Switch	
1	OFF	Interface selection 024 - All barcode numbers will be transacted with the game machine via Netplex interface.
	ON	Interface selection 024B - ID-024B Interface – Barcodes beginning with 00 will be transacted with the game via Netplex. All other barcode numbers will be transacted directly with an SDS-GMU via second WBA serial port.
2	OFF	1 ENABLE
	ON	1 DISABLE
3	OFF	5 ENABLE
	ON	5 DISABLE
4	OFF	10 ENABLE
	ON	10 DISABLE
5	OFF	20 ENABLE
	ON	20 DISABLE
6	OFF	50/100 ENABLE
	ON	50/100 DISABLE
7	OFF	100 Normal Security
	ON	100 High Security
8	OFF	OFF
	ON	TEST MODE
