instructions area

B2:

Setchip will always be a 6.01.xx number. Base will always be 1.02.xx number.

B2 Game program numbers work like this:

0151013

01 is the revision # and the only part of the program number that will change if the game is updated.

51013 is the core program #, and will never change.

B2 games' core program # will always start with 51.

B3:

Setchip will be a 6.02.xx number. Base will always be 1.03.xx number.

B3 Game program numbers work like this:

0152013

01 is the revision # and the only part of the program # that will change if the software is updated.

52013 is the core program # and will never change.

B3 games' core program # will always start with 52.

B2 games can use B3 base chips.

B3 must use B3 base chips (unless a B4 base chip is developed that is backward compatible).

This option can not be changed in this jurisdiction

Cashout/TakeWin - Press to select previous option
 Service - Press to select next option
 Bet 3 Credits - Press to continue to next menu

Casino preference takes priority on which to set.

Otherwise select Hard Lockup for tokenized EGMs with hopper.

This option selects the behavior of the game when a player presses the cashout button with residual credit. This option only affects games that are configured for tokenization with a hopper. Selecting

Hard Lockup will force a handpay lockup when a player cashes out.

Soft Lockup will allow the player to play-on and thus cancel the cashout lockup. (This will not automatically cancel the Cashout Handpay ticket at the Jackpot/Fill workstation. It must be voided manually.)

In a nutshell:

Without tokenization there will never be a Residual Credit and a lockup won't occur.

Choices DISABLED RED / BLACK WITH SUIT

Allow both types if permitted by jurisdiction.

MJT - Multiplier Jackpot Transaction is a bonus that can be set such that all wins on designated machines are multiplied by a selected factor when a player bets any amount or a max amount. The MJT multiplier is usually configured for a preset duration. Example, for a two hour period, betting max coins on nickel video poker will give the player double each win.

Bonus Award is an award that can be set up in the system to offer special awards for birthdays, special events, etc.

The tax limit of \$1200 refers to a win on a single play or a cashout of \$1200 or more. So setting the credit limit to a value much higher than the Tax limit will allow a player to accumulate credits in excess of \$1200 and play them off.

12

JURISDICTIONAL SETCHIP VERSION 6.01.16 (for Aristocrat USA Mk6 Platform)

Money Setup Menu

Currency: [USA] Dollar (\$)
Value of one Coin: \$ 0.05
Value of one Credit: \$ 0.05
Max Credit Limit: \$ 1199.00
Tax Limit: \$ 1200.00

Current Configuration: \$0.05 buys 1 credit

Bet 1 Credit
Bet 2 Credits- Press to select next currency

Service
Bet 3 Credits- Press to select previous option
- Press to select next option
- Press to return to main menu

• **Currency:** Select the legal tender of the country where game resides.

• **Value of one Coin:** Set to the value of the coin to be used.

• **Value of one Credit:** This will be the denomination of the game.

• **Max Credit Limit:** This does not refer to credits but currency value . This value is limited to \$99999.99 dollars max. It is not directly related to the Tax Limit. Setting the Max Credit Limit higher than the Tax Limit will allow players to accumulate credits beyond \$1200 and play them off.

• **Tax Limit:** This is set to \$1200 dollars and can not be changed in US jurisdictions. This refers to an amount won on a single play or an amount cashed out.

This option sets the currency that will be used in the EGM bill validator, coin acceptor, cashout device and some game meters.

Rules:

- Coin and credit values must divide evenly
- Coin value must not be less than credit value
- If tokenization is disabled, coin and credit values must be the same
- In the Nevada Jurisdiction tokenization is limited to coin values less than \$1.00

An error in selection will be explained in the message area. These options must be valid before exiting the money setup menu.

Payout Device and Type Menu

Payout Devices: HOPPER AND / OR ANY ONE PRINTER
Split Pay Type: SPLIT PAY BETWEEN HOPPER AND PRINTER
Pay Type to Split : SPLIT CASHOUT AND CASHWIN PAYS

* Payout Devices and Split Pay Types must be set up correctly before this item can be used.

Bet 1 Credit - Press to select next split pay type

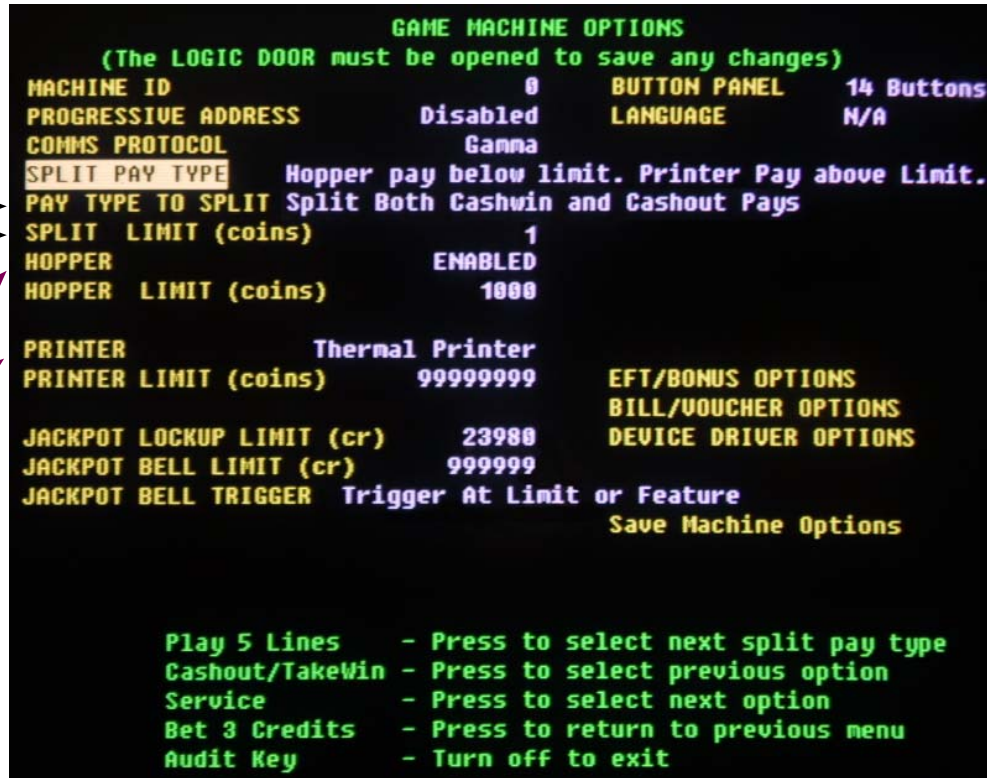

Cashout / TakeWin - Press to select previous option
Service - Press to select next option
Bet 3 Credits - Press to return to main menu

Options have been modified. Return to main menu to save.

If Split Pay Disabled is chosen in step 15, then No Pay Types to Split will display and can not be changed.

If any other choice is made in step 15 then the choice can be made here about which types to split.

15 & **16** relate to this Mark 6 options setup screen

When **step 15** is set for anything except **Split Pay Disabled** these 2 options appear on this screen

If **Split Pay Disabled** these 2 options will not be available

&

hopper or **printer** will have to be disabled

Result of Step **15** choices

if —→ **Print Ticket Above Hopper Limit**
or
or **Split Pay Between Hopper and Printer**
or **Allow Selection of Both Types of Split** is chosen

then —→ a decision can be made here during machine options setup about how much to have the hopper pay and how much to have the printer pay

(a hopper and printer must be available and enabled)

if —→ **Split Pay Disabled** is chosen

then —→ then in step 16 **No Pay Types to Split** will be the only option

(Choose this option if there will either be no hoppers in use or no printers in use)

In the example image above:

This configuration will force all pays of more than 1 coin to print a ticket (unless the printer is disabled, out of paper, etc. or the system is down).

If the printer is not functional for whatever reason, then up to 999 coins will pay from the hopper. (If insufficient coins for a payout, game will lock up for a hopper fill. Once filled, the player may cashout or play on.)

Or pays of 1000 coins or more will lockup for a handpay.

If using a Hyperlink™ then a trigger must be selected here and can be obtained from the Approved Configurations or the Linked Progressive Configuration Form that comes with the Hyperlink.

Progressive Poker games use Linked Progressive.

Each game specifies variations for Hyperlink.
A game error will occur if:

- turnover is selected but not a hyperlink variation
- turnover disabled but variation is hyperlink
- jurisdiction specific variation does not match selected jurisdiction (e.g. GLI - 5 Nevada - 7)

In some documentation the term trigger is referred to as hit rate, turnover, or feature hit rate.

Bet 1 Credits - Press to change play bet button functionality
Cashout / TakeWin - Press to select previous option
Service - Press to select next option

Bet 3 Credits - Press to return to main menu

•In continuous mode the play/bet button will continuously start games if button is kept depressed (or the button is stuck, switch fails, or the I/O board input fails. All player credits may be lost due to a malfunction).

•In toggle mode the player must release and depress the button over again to start the next game.

In poker and some other games the continuous option is not available.

In continuous mode, data entry during game options setup, such as 'casino name', is much quicker because the button can be held down to advance characters instead of repeatedly pushing the button, in those systems that do not automatically enter this data.
