<b>Modifications:</b>								
	<ul> <li>(Version 3.63-03I → 3.75-03I) – 05/2008</li> <li>Banknote Recognition: Added the next generation \$5 (2006 Series) notes. (Released March 2008).</li> <li>Banknote Recognition: Added more data to improve acceptance of the \$10 (2003 series).</li> <li>Banknote Recognition: Added counterfeit measures for the next generation \$50 ('04) notes.</li> <li>Machine Operation: Improved sensor adjustment method to accommodate a wider range of sensor characteristics.</li> <li>ICB: If the Reset Command is received while writing to the ICB, Reset operation will be performed after the data has been completely written.</li> <li>(Version 3.60-03I → 3.63-03I) – 06/2006</li> <li>Banknote Recognition: Added High Security \$100 DIP switch selection. High Security mode allows better rejection of "Super Note" type counterfeits. (Selecting High Security may affect the \$100 acceptance rate).</li> <li>Banknote Recognition: Improved recognition - \$5 (1999 Series).</li> <li>Banknote Recognition: Improved recognition - \$10 (1999 Series).</li> <li>Banknote Recognition: Improved recognition - NexGEN \$10 (2004 Series).</li> <li>Banknote Recognition: Improved recognition - NexGEN \$20 (2004 Series).</li> <li>Banknote Recognition: Improved recognition - NexGEN \$20 (2004 Series).</li> <li>Banknote Recognition: Improved recognition, all denominations.</li> <li>Machine Operation: DIP switch assignment change. \$50 / \$100 are now combined on DIP switch 6. DIP switch 7 is assigned to \$100 normal / high security.</li> </ul>

Japan Cash Machine Co., Ltd.		w37503i_id022(do not release).doc	1/4

# Modifications Cont:

• <u>Machine Operation:</u> Added cleaning mode routine. Acceptor recognizes a custom cleaning card and enters a cleaning mode. (Card is drawn 3 times).

#### (Version 3.38-03I $\rightarrow$ 3.60-03I) - 02/2006

- **Banknote Recognition:** Added next generation \$10(Series 2004).
- Banknote Recognition: Improved counterfeit \$100 detection. (1996, 2001, 2003 series)
- Banknote Recognition: Improved counterfeit \$50 detection. (2001, 2003 series)
- Banknote Recognition: Improved recognition of \$50 banknotes (2004 Series).
- Banknote Recognition: Improved \$5 (1999, 2001, 2003 series) facedown recognition.
- Banknote Recognition: Improved magnetic detection for \$1 banknotes in the reverse directions.
- Banknote Recognition: Improved the security for \$5 and \$10 banknotes by improving the optical detection features.
- Machine Operation: The pusher home sensor is monitored more closely during the push operation. (WBA will enter an error state if any abnormality is detected during this operation).
- <u>Interface:</u> During test mode, (Dip Switch 8 "on"), communication is disabled.
- <u>Interface:</u> WBA checks for ICB components; if the ICB components are detected but ICB is disabled, then the WBA will report a hardware failure.
- <u>ICB</u>: Added ICB feature check. (If ICB modules are installed and determined to be disabled, then report an error. (Failure 03). (Led will flash with a repeated error code).
- <u>ICB:</u> Added banknote reject codes to ICB memory.
- <u>ICB:</u> Added currency assignment table to ICB memory.
- <u>ICB:</u> Modified ICB Cash Box Remove DATA/TIME to update every 30 minutes.

#### (Version 3.35-03I $\rightarrow$ 3.38-03I) – 04/2005

- <u>Banknote Recognition</u>: Counterfeit countermeasures: \$10. (Variation of the counterfeit addressed in version 3.35-03i was still accepted in a few cases).
- **Banknote Recognition:** Similar countermeasures implemented for the \$10 bill were also implemented for \$5, \$20 and Next Generation \$20. (Pre-emptive change).
- <u>Banknote Recognition</u>: Countermeasures for high quality \$50 and \$100 counterfeit notes found during evaluation at the Federal Reserve Bank.
- Machine Operation: A \$5, \$10, \$20 banknote is drawn into the path. Following the usual inspection, if the banknote was inserted green seal first, the WBA will move the banknote about ¼ inch for a final check before sending the denomination message.

#### (Version $3.34-03I \rightarrow 3.35-03I$ ) -03/2005

- Banknote Recognition: Counterfeit countermeasures: \$10.
- Machine Operation: Motor Speed check method was adjusted.
- Banknote Recognition: Improved \$20 (2004) banknote recognition. (Added more data).
- Machine Operation: During Auto-calibration, the WBA will not listen to communication from the Host.

#### (Version $3.10-03I \rightarrow 3.34-03I$ ) -08/2004

- <u>Banknote Recognition:</u> Added Next Generation \$50 banknote recognition.
- **Banknote Recognition:** Improved \$50 recognition. (2001 series).
- Banknote Recognition: Added \$5 counterfeit countermeasures.
- Banknote Recognition: Improved \$10 counterfeit detection.
- Banknote Recognition: Counterfeit countermeasures: \$100 (Found in Japan and Taiwan).
- <u>Interface:</u> Improved CPU runaway detection. A CPU run-away event will be detected within 200 ms and corrected.

#### (Version $3.00-03I \rightarrow 3.10-03I$ ) -02/2004

- Banknote Recognition: Counterfeit countermeasures: \$5
- <u>Machine Operation:</u> Improved error checking. Software was changed to examine transport related errors more closely. The error must exist for at least 100 ms to be considered valid.

Japan Cash Machine Co., Ltd.		w37503i_id022(do not release).doc	2/4

Modifications	(Modifications since previous version 2.13-03) – 06/2002
Cont:	• Banknote Recognition: Added Next Generation \$20 recognition.
	• Banknote Recognition: Added more 2001 series \$50 data.
	• Banknote Recognition: Counterfeit Countermeasures: \$1 found in California.
	• Banknote Recognition: \$20 counterfeit countermeasures, 2 notes found in Washington State.
	Banknote Recognition: Improved detection of hybrid notes.
	• Banknote Recognition: Counterfeit countermeasures: \$100 found in Aruba.
	• Banknote Recognition: Counterfeit countermeasures: \$100 found in Singapore.
	• Banknote Recognition: Counterfeit countermeasures: \$50 found in Bulgaria.
	• Machine Operation: DIP switch assignment change: ID-022/023 Interface selection is now
	assigned to DIP switch #1. \$50 enable / disable is now assigned to DIP switch #6. \$100
	enable / disable is now assigned to DIP switch #7.
	• <u>Interface:</u> Stacked sequence is now sent after a bill completely passes the feed-out sensor.
	• <u>Interface:</u> Un-used area in the file is now set to 0 instead of 1. (Mississippi regulation).
	• <u>ICB:</u> ICB functions and features are now included as standard in the software. ICB is enabled
	/ disabled via set ticket method.
	• <u>ICB:</u> ICB memory now includes data for acceptance rate calculation.
[	• <u>ICB:</u> ICB cashbox counter allows for multiple insertion / removal events.
Memo:
